## Top Drive and VFD Discontinuation and Obsolescence

---

### Background

- In order to focus our manufacturing effort on customer demand for the latest in top drive technology and due to a reduction in sub-supplier parts availability, Canrig is discontinuing the production of certain top drive product lines. This includes all of the 450HP, 900HP, and 1350HP models in the EMI, EC, ECI, ECIS, and ECIX lineup.

Canrig will continue to provide parts and service for these discontinued model top drives, including Level IV recertification, for a limited period of time.

- Due to the ER/EI and MD500 Variable Frequency Drive (VFD) product lines being discontinued by the sub-supplier/manufacturer, these VFDs are considered obsolete effective immediately. Canrig had been supporting existing equipment for several years with available inventory from the manufacturer, but replacement components for this equipment in older Canrig/Tesco Power Modules (PMs) are increasingly unavailable.

As part of the discontinuation of the above top drive product lines, Canrig is also discontinuing the manufacture of eDrive VFD/power module effective immediately. Parts and service for this discontinued model will be provided for a limited time.

### Affected Equipment

- EMI450, EC, ECI, ECIS, and ECIX top drives with permanent magnet motors
- Power Modules equipped with ER/EI, MD500, or eDrive VFDs

### Recommendation

To avoid excessive downtime, customers may elect to replace their affected top drives and power module/VFD houses with newer models. Contact your Canrig sales representative or RIGLINE 24/7™ Support for more information and commercial solutions to fit your operation.
